## Instaflex in China

The guest mansions and the country club for foreign dignitaries in Beijing needed renovation. The engineer responsible for this project chose INSTAFLEX after attending one of our seminars, a decision he has not had cause to regret.

Chinese gardens with their bridges, ponds, and babbling brooks are the epitome of Asia and Chinese culture for us Europeans. Located in Beijing in the middle of such delightful gardens are the guesthouses for foreign dignitaries and guests of the government. The mansions and the country club are always kept in excellent condition in order to indulge the foreign guests.

### Domestic installations with INSTAFLEX

The buildings are equipped with a 2-pipe Fancoil air conditioning/heating system. Besides the cold water, there is also a central hot water distribution for the guest bathrooms, the kitchens, whirlpools, showers, and steam baths. For all these installations, INSTAFLEX is the answer.

The system can be used for 8 °C cold water and up to 95 °C hot water.

### Engineers satisfied with the INSTAFLEX system

The engineer, Tan, who was responsible for the installations (heating, air conditioning, plumbing), visited one of our seminars three years ago. He studied the course documents carefully and decided to give the INSTAFLEX system a try next time he had a major renovation project.

MT Corporation was assigned the job and Jiang Shi, a Georg Fischer employee in Beijing, together with 10 MT workmen installed the approx. 10,200 meters of INSTAFLEX pipe with diameters ranging from 16 to 63 mm and 320 meters of 75 to 110 mm diameter including all the fittings and valves in just 10 weeks time. In the country club and the presidential palace there is no telltale sign of where the pipes could run. The engineer was particularly pleased about the short installation time and hopes the service life will be longer than that for the commonly used galvanized iron pipes.

*Our INSTAFLEX system was selected for the domestic installations in the guesthouses in Beijing.*

*Jiang Shi, Georg Fischer employee in Beijing, is pleased with a job well-done.*

We know that Mr. Tan will not be disappointed in INSTAFLEX in this respect as well. We also think he won't miss the rust color of the water from the old systems either. Since more guesthouses will need to be renovated in the coming years, our sales people will drop in on Mr. Tan occasionally to remind him that there really is a very good piping system behind the walls, one that is quiet, doesn't rust, and poses no problems for service personnel.
